

With SkillNet, you can cut through the opportunistically expensive what-ifs of online strategy and execution. Instead, you can get results by following a proven path to your goal. We have a template driven, process oriented solution for many of your online projects, including upgrades to newer, better technology, such as the Endeca Upgrade Pack.

Our approach to implementing any technology is simple: We make sure our industry consultants are trained, and have worked extensively with the software development kits. Then we create best practices and templates. That way, we don't use your valuable resources to experiment or learn the latest technology.

SkillNet's Endeca Practice
